

INSTRUCTIONS

- 1) Flip the table over
- 2) Place the legs in the corners bowed part out (leave some room between the edge and where you put the legs)
- 3) Use a pencil or marker and mark where you want the screws to go
- 4) Drill small pilot holes.
- 5) Screw the legs on one at a time
- 5) Flip your table back over and you are ready to go.

****If you have a round or Oval table the general rule is parallel and equidistant. Just make sure the legs are near the edge of the table and keep them far enough apart and in alignment to keep the table steady.*****
